

Why the same screens can't be used when printing a design onto both tee's & bags

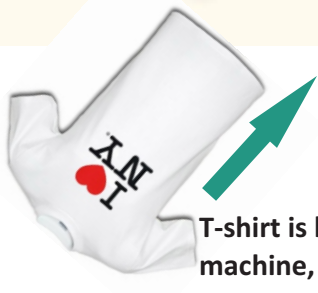

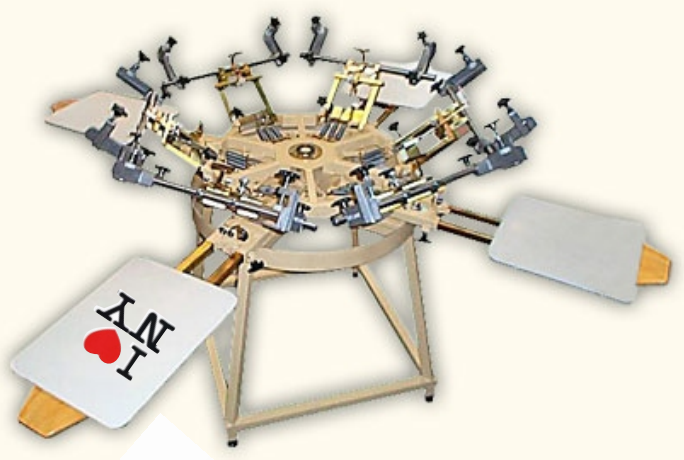

Ever wondered why bags & tees cant be printed using the same screen setups?

If the same screens were to be used to print the same design onto t-shirts & tote bags, the tee design would be printed correctly, but the bag design would be printed upside down.

Though it may not be possible to use the same screens, the same films can be used to expose the screen in the opposite direction.

Below is a visual of this scenario.

T-Shirt

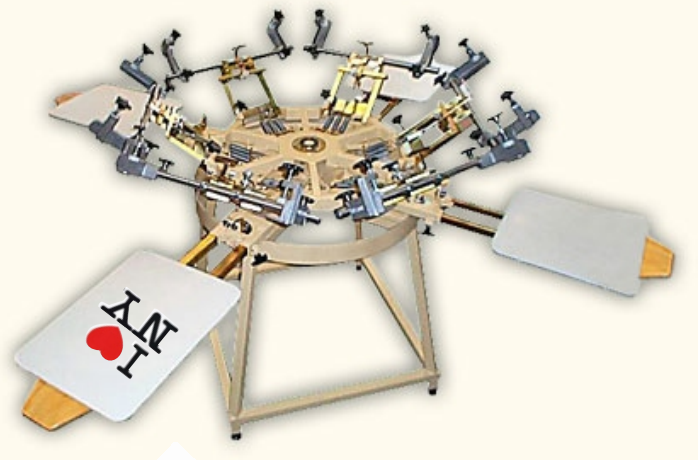

T-shirt is loaded onto the machine, from the hem.
